

# CloudBlue

## Multi-cloud Orchestrator

### Develop and deliver unique IaaS solutions faster

## CloudBlue

Multi-cloud Orchestrator streamlines application and workload deployments across your private, hybrid and public cloud stack from a single dashboard. Using integrations with configuration management tools, you can develop your own unique IaaS solutions and accelerate your solution deployment on cloud.

---

### Build and innovate faster

Build solutions faster with customer-ready application templates, and deploy applications more quickly with automated tools and preconfigured blueprints. Save more time by managing multiple cloud environments from one platform.

---

### Improve efficiencies

Cut down on your resources spent on provisioning, deployment, billing and more. Plus, save on the overhead for multiple architects to manage multiple cloud platforms. You'll increase your productivity with streamlined operations.

---

### Increase revenue opportunities

Expand your portfolio with prebuilt solutions, and build your own unique IaaS co-sell solutions. You can also offer scalable solutions across multiple cloud platforms, and update your offerings as you automate infrastructure deployment.

## What can your business achieve with Multi-cloud Orchestrator?

### Multi-cloud orchestration

Standardize and orchestrate resource deployment and management processes across multiple cloud platforms (public, private or hybrid).

### Build cloud-agnostic applications

Creating customer-ready packages of your specialty business solutions and/or workloads at scale.

### Switch to a DevOps model

Accelerate your software delivery by moving to a development operations (DevOps) model.

## What can you do with Multi-cloud Orchestrator?

### Multi-cloud management

A unified dashboard allows you to manage resources and deployments across your public, private and hybrid cloud stacks.

### Integration with commerce platform

Pull and match subscription, deployment, usage, billing and invoicing information for each IaaS platform in your CloudBlue Commerce system.

### Create IaaS offers

Custom build infrastructure solutions and create listings for them through CloudBlue Connect to be listed on your storefront.

### Infrastructure automation

Combine an application's reference architecture, configurations, deployment scripts and code from open source communities into a template.

## About CloudBlue

CloudBlue delivers a hyperscale platform with hypergrowth products and services and access to a hyperconnected ecosystem of 200+ top-selling vendors, 200+ leading brands and over 80,000 partners globally.

### 120 pre-integrated products including

**80,000** active resell partners

**30 million** cloud subscriptions

**2 billion** potential end customers

### 200 leading-brand customers including
